General description

Perfect for industrial marking. The thermal transfer printing method increases the smudge and scratch resistance of the printed surface and provides increased resistance to oils and chemicals as well. For printing many different labels such as self-adhesive labels for equipment labelling (TA) and cable markers (TCK).

The FLEXIMARK® Thermoprint A4 /300 is build for uncompromising permanent operation and for high printing volumes. The Thermal transfer print is used for several applications. Every specific customer demand can be implemented due to the large periphery and software. Different designs, in many languages, in black and white, in color, with or without barcode – each label is printed by the label marking printer as desired, in the right quantity and without any mistake.

Product features

No adjustment of the print head for different widths of material. Printing on very narrow or very thick continuous materials.

The print speed for difficult printable materials is specified to 30-250 mm/sec.

- Ribbon retainer: Easy and centred insertion of the ribbon with the threepart tightening axles. Due to the imprinted spacer positioning of the ribbon is facilitated.
- Label retainer: The labels are inserted into the label retainer and adjusted automatically by fitting with the margin stops.
- Operating mode: Stand-alone operation, PC-application or network.
