

Rationalisation by standardisation and decentralisation

With DESINA[®] (DEcentralised and Standardised INSTallation Technology); the Verein Deutscher Werkzeugmaschinenfabriken e.V.

(Federation of German Machine Tool Manufacturers) has developed a comprehensive overall concept for standardising the electrical installation of plant and machinery. Using the latest technologies, installation becomes simpler, assembly

and maintenance are speeded up and the quality improved. Decentralisation means that control components and their functions can be removed from the central switchgear cabinet and transferred to field level.

Lapp Kabel and DESINA[®] conform products

On the basis of existing field BUS systems, the VDW – in cooperation with the machine tool, automotive and component supply industries – has developed new standards

in the area of connectors and for more rational cabling. As a leading supplier to the machine tool industry, Lapp Kabel declares its wholehearted support for the

DESINA[®] concept. We develop DESINA[®] conform solutions for you with a minimum of delay: from the components to the ready-to-install, custom-built solution.
