

83881100	<b>DATA SHEET</b>	
Valid from: 11.05.2022	<b>FLEXIMARK® THERMO CLIP™</b>	

The Thermo Clip™ Series serve as overtemperature indicators for electrical assets. Using a patented Thermochromic technology, these easily-installed clips provide a color-changing visual indicator. It works as part of the visual component in the inspection process prior to and between infrared and ultrasound inspections. With a memory-effect feature, these non-conductive clips can also let inspectors see a permanent record of overtemperature excursions in intermittently loaded systems.

### Technical data

Material:	5-10% Thermochromic Masterbatch. 90-95% Polypropylene, flame retardant to UL94V0 self-extinguishing rating, nonhalogenated
Initial Color Change Temperature:	53°C
Permanent Color Change Temperature:	71°C
Tolerance:	+/- 1°C
Response Time:	5 to 20 Seconds
Storage:	Store at room temperature & humidity (i.e. 16°C to 27°C & 40% to 60% RH)
Product Lifespan:	Replace overtemperature connection indicators within a maximum lifespan interval of 5 years
Dielectric Strength:	44Kv Per mm
Wire Insulation Rating:	36kVAC/600VDC

### Installation:

Thermo Clip™ Series Clips are designed to be push fitted only onto the outer insulation of a cable, adjacent (15mm-30mm distance) to its connection terminal. Thermo Clip™ should not be inserted anywhere into the current carrying path of the circuit or directly attached to bare live metal parts of the circuit.

Caution: Thermo Clip™ Series are designed for use on electrical cables and as such installation must be assessed by a competent electrician licensed to applicable local requirements prior to their application.

### Color:

Purple

### Approvals:
