

Putting an end to cable chaos!

And it's so simple

Today: emergency mission at a production plant

This is Paul

Paul is an electrical engineer.

His job is to fit electrical installations on-site for various customers, as well as maintaining the electrical equipment in machines and production plants.

Customer: Paul, we urgently need your help. Our machine is broken. Every hour of downtime costs us a lot of money. Please come quickly!

Paul immediately heads for the customer. At the plant, the machine fault is quickly detected: a cable is defective. However, at the control cabinet it is not obvious which cable is damaged, because the cables and components are not labelled clearly.

Oops, pure chaos in the control cabinet. Things will all take a bit longer.

Paul has found the defective cable and has replaced it. And to make things go faster next time, he temporarily marks the cable with a FLEXIMARK® wrapping label. Paul always has some of them with him.

Three days later:

Paul is called to an emergency mission again.

Thankfully, everything is perfectly labelled. FLEXIMARK® is great.

It's so simple: FLEXIMARK® marking system puts an end to cable chaos in the control cabinet.

Not only Paul benefits from FLEXIMARK®

The thorough marking of cables and plugs can shorten repair times. This makes work far easier for everyone who has to identify components in the control cabinet.

Three examples:

FLEXIMARK® organised shrink tubes are already cut to the respective size and are suitable for marking single cores and wires.

FLEXIMARK® LCK wrapping labels are markers of vinyl with a protective transparent foil for marking cables. The protective foil protects the text from abrasion and solvents.

FLEXIMARK® Flexiprint TF are markers for single core marking and glass fibre cables. They are easy and quick to install.
