## EPIC<sup>®</sup> H-B housings with new bolts

The housings of the H-B series will get new bolts with another surface. The new bolts are applied for hoods and cable coupler hood, as well as panel mount bases and surface mount bases with double levers size H-B 6, 10, 16, 24, H-A 32 und H-A 48. The product H-B 32 is changed in cable coupler hood, panel mount bases and surface mount bases. This change is going to affect several hundred products.

The new surface has the following advantages:

- New improved corrosion protection against salt mist
- Much better sliding characteristic for the movement of the lever
- Anthracite colored design of the bolts

The part numbers of the affected housings stay unchanged. This optimization will flow continuously into the production. Due to the large variety of products and different range of stocks in some cases its possible to have mixed deliveries to the customers. The production of the new bolts has already started.
