## At home in Stuttgart, but known all over the world

The World of Lapp is based in Stuttgart. This is where it all started for our company, which was founded in 1959 as U.I. Lapp KG (now U.I. Lapp GmbH). From its headquarters in Stuttgart we have determinedly evolved to become a global player – with currently 15 production plants in Europe, Asia and America, 41 sales companies and more than 100 sales partners, 3,000 employees. The larger Lapp companies such as Russia, India, China, Canada and Mexico have their own warehouses. The others are promptly supplied through our high-performance logistics centres. At our Lapp Centres we are also strongly committed to enhancing the knowledge of our employees and customers. After all, knowledge is the ink with which the future is written down.

One of our most successful “products” is that of proximity to our customers. On the one hand, we practice intensive dialogue with designers and planners, manufacturers and users. This enables us to identify new requirements and trends at a much earlier stage, to quickly provide you with suitable solutions. Innovation leadership put into active practice.

On the other hand, proximity to our customers really means something to us: our presence extends all round the globe. As a reliable partner on a local basis we support our customers in exploiting markets by providing them with short delivery times and low logistics costs.

LAPP KABEL STUÏGART UNITRONIC® BUS ASI

LAPP KABEL STUÏGART UNITRONIC® BUS ASI

Info

- "LD" = Long Distance

### Benefits

- The new BUS ASI LD 2 x 2.5 (Long Distance) allows even modules located further away to be connected. AS-I power supplies can be reduced. The BUS ASI LD is downwards-compatible with version 1.5.
- The rubber versions are halogen-free

### Application range

- Communication at sensor/actuator level
- UNITRONIC® Fieldbus sensor-/actuator wiring
- For fixed installation as well as occasional flexing at free, non-continuously recurring movement without tensile load
- The TPE version has an oil-resistant outer sheath. It is suitable for wet areas, in particular in conjunction with water-soluble cooling lubricants.

### Product features

- Data and power are transmitted via an un-screened, geometrically coded two-core flat cable (protection against polarity reversal).
- The conductor is contacted by "piercing technology" within the ASI modules.
- The sensors are connected to the ASI modules (coupling modules) using round cables (connection cables).

### Approvals

- ASI is standardised Europe-wide in EN 50295 and internationally in IEC 62026-2.
- PVC version has UL/CSA (CMG) approval.

### Design

- Extra-fine wire, tinned copper strands
- Core insulation: blue and brown
- Profiled outer sheath made of rubber (G), thermoplastic elastomers (TPE) or PVC
- Colour: yellow (RAL 1023) or black (RAL 9005)

**TY-RAP® detectable cable ties**

TY-RAP® Detektierbarer Kabelbinder

**Benefits**

- Detectable cable ties with international FDA and HACCP hygiene monitoring regulations
- The round, flat, edge-free tie-heads allow assembly without getting caught and protect against injury and damage at adjacent cables and components.
- The cable tie can be gripped securely for easy tightening.
- In addition, the safety-grip tab prevents the tie from slipping out during assembly, and secures it before tightening by hand or with a tool.

**Application range**

- Food and beverage industry, especially for production and processing equipment of milk and meat products
- Applications with strong chemical influences
- Pharmaceutical production

**Product features**

- The new Ty-Rap ® cable ties are designed with a unique compound that activate metal detectors, X-ray and visual recognition systems.

**Approvals**

**Note**

- Storage requirements: nylon (polyamide) is, by its nature, susceptible to external influences. Cable ties are mechanically moistened in order to ensure optimal use. As such, they must be stored in a cool, dry location and must not be exposed to direct sunlight. Cable ties are packed in plastic bags to retain moisture; these should remain closed until the cable ties are used.

**Cable guiding and fixing**
**Cable trolley systems**

**Cable trolley system for round and flat cables**
**Planning a cable trolley system:**
**First find out:**

- Travel distance
- Cable package - design (flat, round) and dimension
- Support bracket - wall or roof mounting, I-Beam, with distance
- Environment - indoor, outdoor, dust, moist, acid

**1.) Type of system**

Provide a brief drawing of the placement of cable clamps. Choose type of system you would like to use (wire, c-profile, I-beam, etc.) with regards to cable weight, size, bending radius and environment.

**2.) Cable length**

Find out the cables length you have to use in your system. Here fore consider the travel length multiplied by the following factors:

Flat cable:

Travel distance less than 20 m x 1,25 = cable length

Travel distance 20-50 m x 1,20 = cable length

Travel distance greater than 50 m x 1,50 = cable length

Round cable:

Travel distance x 1,50 m = cable length

**3.) How many trolleys do I need?**

Divide the cable length by the double cable sagging which will give you the number of trolleys including the towing trolley. Note: standard cable sagging is 0,75 m.

**4.) Parking space**

Cable trolley length x number of trolleys + towing trolleys length = parking space

**5.) Number of rails and track couplers**

Travel distance + parking space = total track length

**6.) Number of support brackets**

Consider a max. of two meters space between the support brackets. Choose correct mounting bracket (roof, wall, I-beam, etc.).

**7.) Finally add**

2 pieces of end stopper - additional cable for connection (normally 2-6 meters)

1 piece of end clamp

1 piece of towing arm

**8.) Select a suitable cable gland of our SKINTOP® SKINDICHT® product range.**
