### General description:

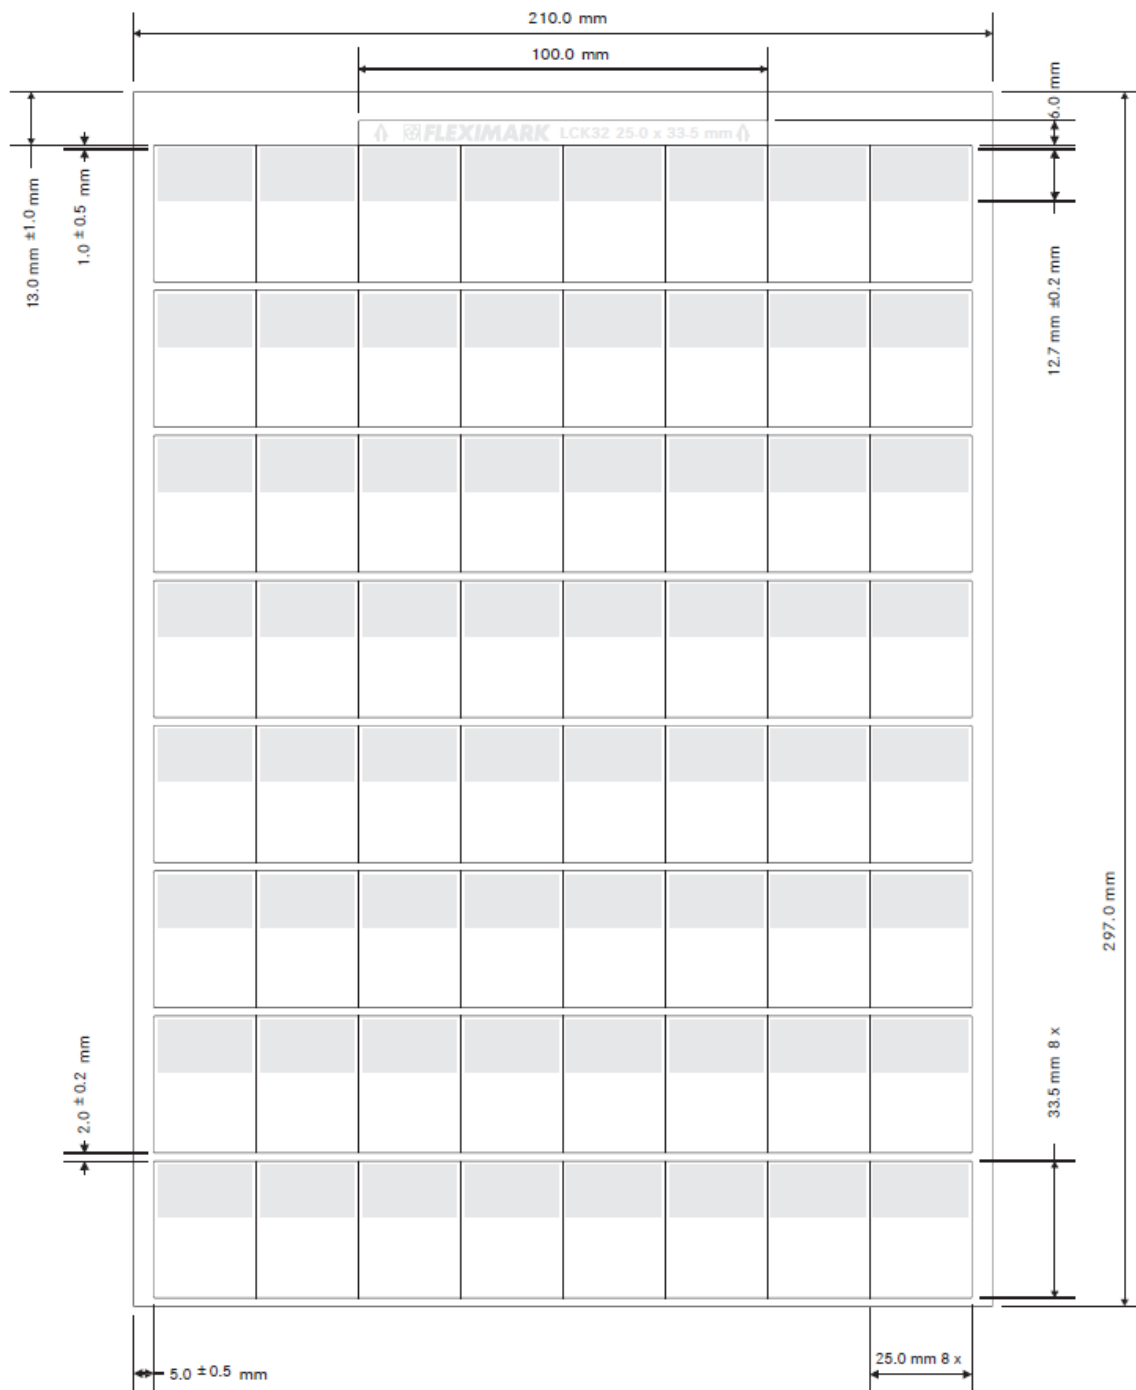

- For cable marking and for printing with commercial laser printers
- A transparent foil is wrapped around the cable and pasted over the printed fields, that the printing is protected against abrasion and pollution
- Resistant to chemicals, UV-radiation, moisture and some oils
- Diverse criteria as ageing resistance and chemical resistance are tested by the independent SP institute according to SP 2171 test method

### Characteristics:

|                              |                        |
|------------------------------|------------------------|
| Colour                       | White                  |
| Material                     | Halogen-free polyester |
| Thickness                    | 0.025 mm               |
| Temperature range            | -40°C to +125°C        |
| Minimum working temperature: | +10°C                  |

|                                |                                       |             |
